24 November 2008

Infinergy starts construction of Castle Pill Wind Farm

This week wind farm developer Infinergy will start construction works at Castle Pill Farm in Steynton, near Milford Haven in order to erect 3 new wind turbines.

Each of the turbines, manufactured by EWT of the Netherlands and new to the UK, will have a maximum generating capacity of 900 kilowatts (kW). Together they will generate enough green electricity to power just over 1500 homes each year.

Lorraine Dallmeier, Infinergy's Senior Project Manager comments: "Climate change is the greatest environmental challenge facing the world today. As part of its drive to combat climate change, the Welsh Assembly Government has developed a 'Renewable Energy Route Map' and envisages Wales generating all of its electricity from renewable sources by 2028. With this wind farm we can make a contribution to meeting that target."

The first step in building the wind farm will be the construction of the access tracks to the turbines on site. Ms Dallmeier said: "We expect to be able to start construction of the wind farm mid December and we anticipate the turbines to be fully operational half way 2009."

Infinergy recently moved into the Technium in Pembroke Dock, being the first tenant to set up an office there. It's the company's first step into Wales, having built up a project portfolio in England and Scotland.
